

The background features a stylized mountain range with white peaks and grey slopes. A yellow sun is partially visible behind the mountains. The foreground is filled with wavy, layered bands of teal and blue, representing water. The text is overlaid on this graphic.

The rate of ice loss increased

X4

over the last 10 years
compared to the first decade
of the 21st Century.

117 Gigatonnes
(or about 120 cubic kilometers)

Amount of water lost by glaciers

*That's enough water to submerge an area the
size of Toronto by 10 meters each year.*
